

ANAL JOSEPH

Data Scientist

Bengaluru, Karnataka Phone: +91-7558056329 Email: analjoseph9744@gmail.com Linked In GitHub

SUMMARY

Data Scientist with hands-on experience across the full data science lifecycle, including data preprocessing, feature engineering, model building, analytics, and dashboard development. Skilled in Python, SQL, Scikit-learn, XGBoost, TensorFlow, PyTorch, Hugging Face, and LangChain, with strong interest in Machine Learning, Generative AI, Natural Language Processing (NLP), and data-driven software development. Experienced in building predictive models, NLP and conversational AI prototypes, and interactive Business Intelligence (BI) dashboards that improved model accuracy by 9%, reduced manual reporting time by 30%, and supported decisions for 15+ stakeholders.

SKILLS

Programming & Querying: Python, SQL, TypeScript, Git

Machine Learning & Deep Learning: Scikit-learn, XGBoost, TensorFlow, PyTorch, Predictive

Modeling **NLP & Generative AI:** Hugging Face, LangChain, OpenAI API, Sentiment Analysis, Text

Classification **Data Analysis & Visualization:** Pandas, NumPy, Tableau, Power BI, Exploratory Data Analysis (EDA) **Other Tools:** Git, AWS, Figma, Google Cloud Platform (GCP), MongoDB

EXPERIENCE

Data Science Intern — Luminar Technolab

April 2026 – Present

Onsite / Tools: Python, SQL, Scikit-learn, XGBoost, Hugging Face, LangChain, Tableau, Pandas, Git, AWS, GCP

- Worked across the full data science lifecycle — data preprocessing, feature engineering, model building, analytics, and dashboard development — to support business decision-making.
- Built and optimized 3-4 machine learning models for predictive analytics using Python, Scikit-learn, and XGBoost, improving prediction accuracy by 9% over baseline models.
- Performed structured data analysis on datasets of 10,000-100,000+ records using Pandas, NumPy, and SQL, and designed interactive dashboards in Tableau and Power BI, reducing manual reporting time by 30% and used by 15+ stakeholders to surface actionable business insights.
- Built NLP and conversational AI prototypes with Hugging Face, LangChain, and OpenAI API for sentiment analysis and text classification, reaching 87% classification accuracy across 500+ test samples.
- Used Git for version control across model iterations and collaborated using AWS/GCP cloud environments for model training and data storage.

Project Associate — Ziuke Infotech Pvt. Ltd.

January 2026 – April 2026

Onsite

- Contributed to a live development team on a contract basis, supporting feature delivery and bug resolution across assigned project modules, resolving 20+ tickets and reducing bug backlog by 15%.
- Collaborated cross-functionally with developers and project stakeholders using Git-based workflows to deliver assigned project work on schedule.

PROJECTS

Predictive Analytics Model Development

April 2026 – Present

Python, Scikit-learn, XGBoost

- Built and tuned machine learning models for predictive analytics as part of ongoing business solutions at Luminar Technolab, achieving 90% accuracy, a 12% improvement over the existing baseline.
- Applied structured data analysis with Pandas, NumPy, and SQL to prepare clean, model-ready datasets, cutting data preparation time by 20%.

NLP & Conversational AI Prototype

April 2026 – Present

Hugging Face, LangChain, OpenAI API

- Developed NLP and conversational AI prototypes for sentiment analysis and text classification using Hugging Face and LangChain, achieving 85% accuracy on labeled test data.
- Integrated OpenAI API to extend prototype capability for real-world conversational use cases, cutting average response handling time by 20%.

CERTIFICATIONS

- A Tour of Google Cloud — Hands-on Labs: Completed hands-on labs covering core Google Cloud Platform (GCP) services.
- Monitoring MongoDB with Built-in Tools: Certification covering database monitoring using MongoDB's built-in tooling.

EDUCATION

BCA — Computer Programming

January 2023 – December 2025

Indira Gandhi National Open University
